CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention involves the early diagnosis of cancerous or precancerous conditions in the gastrointestinal tract by detection of a backleak of signature proteins or carbohydrates in a biological sample obtained from the gastrointestinal tract.

SUMM . . . downstream of their secretion, will allow for their chronic leak into the bloodstream, raising their level in serum. Therefore, salivary amylase levels in serum have important diagnostic predictive value for esophageal and gastric precancerous conditions, specifically Barett's Esophagus, atrophic gastritis and H. pylorii infection. Serum pepsin levels likewise have diagnostic value in precancerous gastric

conditions, such as atrophic gastritis and H. pylorii infection.. . .
